

Turbofan Engine Test Equipment

Cenco is a leading supplier of test facilities and associated equipment for the purpose of confirming performance of our customers' aero engines. Test equipment designed for production pass-off, development and MRO maintenance is all a part of the Cenco International product offering for all types of Turbofan Engines. Each of the engine specific adapters are designed to meet the critical aerodynamic characteristics and mechanical loads required by the OEM to enable the engine to be promoted from the test cell to the airframe with confirmed performance.

For these reasons, Cenco is the clear choice for your test facilities needs. As the longest-operating test cell company in the world, Cenco provides the lowest risk option for all your testing requirements.

Cenco International's team of experienced engineers and project managers will make your project go smoothly and result in a successful test facility.

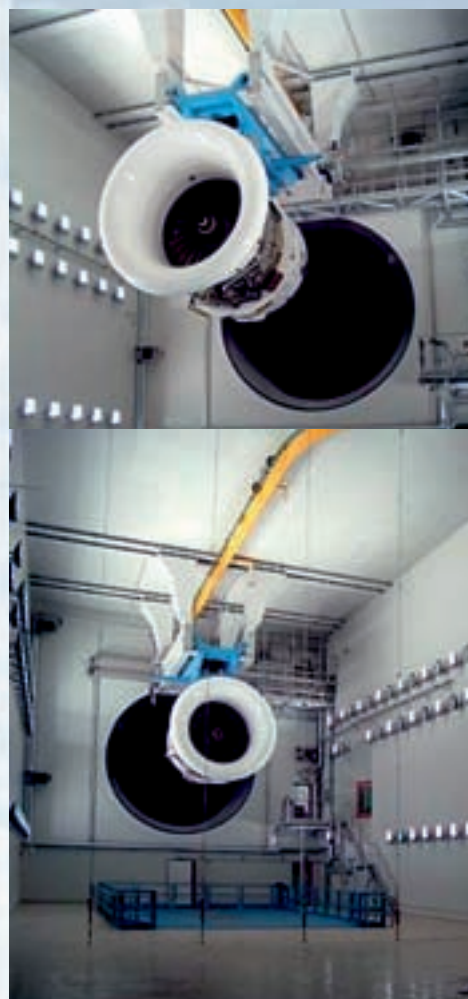

**Cenco offers the
Widest Range in
Engine Testing
Solutions.**

Aero-Engine Test Equipment Capabilities

Cenco International manufactures and delivers test equipment for all types of engines

Cenco works with your team to meet your test equipment needs in the time required

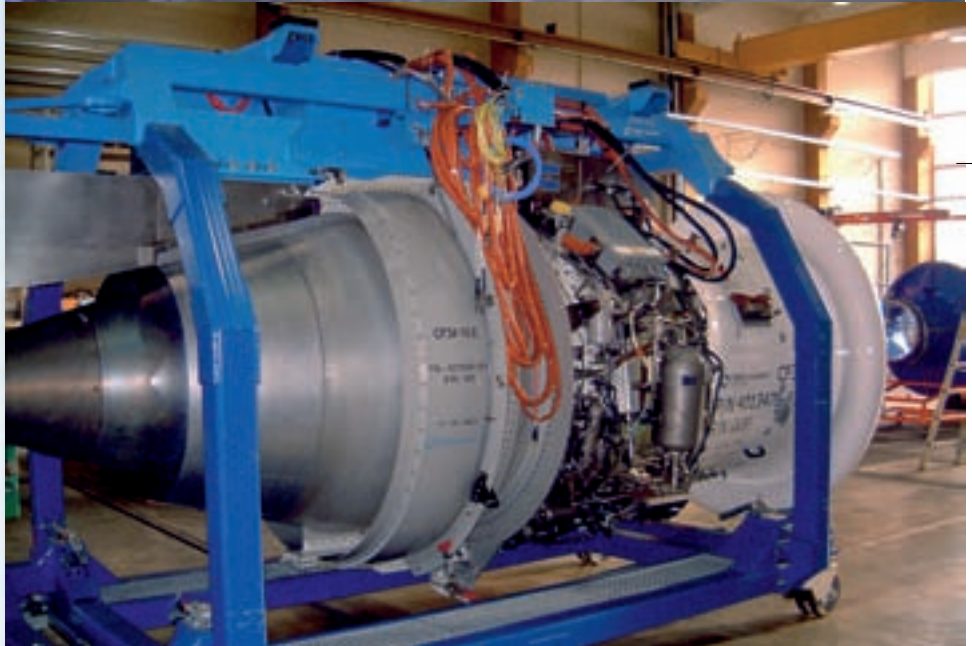

Working closely with the OEM to guarantee that all Test Equipment meets the performance requirements. Utilizing Unigraphics or CATIA, Cenco provides 3D designs to maximize fit-and-finish of every element. All products are thoroughly inspected & certified prior to delivery through dimensional confirmation control.

**Cenco International is
EN9100 & ISO9001-2000**

A complete product offering from Preparation to Test

Cenco provides the finest in test facilities for your testing needs. The design and completed products maximize throughput and provide a safe working environment for your staff.

Our state-of-the-art Data Acquisition System (DACS) provides all of the engineering information your operators require in the fastest time compared to any system on the market.

Global Leadership in Engine Test Solutions

As the most experienced test cell company in the world (over 40 years), Cenco is committed to offering its customers the tools they need to test their engines accurately, safely and efficiently. Cenco International provides complete turnkey test facilities, test cell upgrades, or specific test equipment. Cenco's expertise covers the spectrum of aerospace propulsion, from turbojet and turbofan to turboshaft, turboprop and APU engines for military or civil applications.

Worldwide Support – We Make Your Life Easier !

Because you can not afford for your test cell to be down for days, we have built the Cenco International™ global network to provide you with a fast and effective customer support. Cenco also offers a complete package of services to help you operate your test cell smoothly, securely and productively. These services include: help-desk, hotline, training, calibration, spare parts, inspection and preventative or corrective maintenance.
